

SlideDriver™ Snow Kit

HySecurity SlideDriver chassis snow brushes and drive rail snow scrapers keep your gate functioning in heavy snow and ice conditions.

PART#	DESCRIPTION
MX000525	Replacement Snow Scraper blade
MX001224	Snow brush and scraper kit, all SlideDriver models except SlideDriver 200
MX001782	Snow brush and scraper kit, SlideDriver 200
MX001223	Replacement Snow Brushes
MX001229	Snow scraper kit for SlideDriver, two scraper blades and hardware

SlideDriver with snow brush and scraper kits installed

Reduce snow and ice buildup with the snow brush and scraper kit. The snow scraper kit maximizes wheel traction and the brushes prevent snow from entering the operator housing to ensure smooth limit switch operation.

SlideDriver chassis snow brushes and drive rail snow scrapers allow the wheels to make direct contact with the drive rail to reduce slippage and help prevent snow and ice from interrupting gate automation.

Snow brush and snow scraper kits can be ordered together or separately. Cold weather heater strip and thermostat also available.

SlideDriver functions exceptionally well in arctic temperature conditions. Its hydraulics cycle gates in -40F (-40C) to 158F (70C) climates, far colder (and hotter) than any electromechanical operator.

Snow brush and snow scraper kits.

Installation on SlideDriver 50VF2/3

SlideDriver 50VF2/3 operators, limit switch arms are mounted on the outside of the SlideDriver chassis. On occasion, these arms can stick due to ice buildup and cause the drive rail to jam. If this occurs often, cut approximately 4-inches (10cm) off the ends of the lower brush as shown here. Pack the limit switches with silicone grease to help prevent ice buildup.
