

SmartTouch 725 Improvements, CNX Compatibility

HySecurity, a Nice brand, introduces an Enhanced SmartTouch 725 Controller for SlideDriver II.

We're excited to announce a major upgrade to the SmartTouch 720 and 725 controllers for the new SlideDriver II, effective November 15, 2024.

What's New?

All SlideDriver II models (SD15, SD40, SD50F, SD80V, and SD200V) will be equipped with SmartTouch 720 and 725 controllers housed in a durable white polycarbonate enclosure. This high-performance material is designed to withstand extreme heat, boosting operational temperature thresholds by an impressive 100°F*. The white finish further enhances protection by reducing heat absorption from direct sunlight.

Why It Matters

This enhancement ensures superior performance in hot climates, reducing the risk of heat-related damage to controllers. While we still recommend minimizing direct sunlight exposure, the new design offers added peace of mind with its enhanced durability.

Seamless Compatibility and Updates

The SmartTouch 725 is now backward compatible with SwingSmart CNX and SlideSmart CNX.

This upgrade underscores our commitment to delivering reliable, cutting-edge solutions to meet your needs.

For more details, reach out to your HySecurity representative.

**The operational temperature specification for SlideDriver II is not being revised. These improvements bring operational margin over the existing specification.*
