

951N* Wireless Millennium Keypad Programming Instructions

First, follow the instructions for the 950/951N keypad for entering the “Master Code” and program at least one “Access Code”. Then follow the appropriate instructions below for the receiver in your gate operator.

For operators using the 318N hard-wired radio receiver:

1. Set relay output time on 951N to 5 seconds by pressing:
Master Code (3 beeps) 5# (3 beeps) 5#
2. Put the 318N receiver into programming mode by pressing and releasing the yellow program button. (red light on receiver will come on solid)
3. Enter an access code on the keypad.
4. When the red light on the receiver goes out immediately enter the access code on the keypad again.
5. Red light will blink three times indicating proper programming.
6. Test keypad to ensure proper activation of the gate operator.

For operators using the OXI/A plug-in radio receiver:

1. Set relay output time on 951N to 5 seconds by pressing:
Master Code (3 beeps) 5# (3 beeps) 5#
2. Put the OXI/A receiver into programming mode by pressing and holding the button on the receiver until the green light on the receiver is on solid.**
3. Enter an access code on the keypad.
4. Green light will go out and then blink three times indicating proper programming.
5. Test keypad to ensure proper activation of the gate operator.

**This method of programming will program the transmitter into channel one of the receiver. If a different channel is desired, press and release the button on the receiver the corresponding number of times for the channel desired. For example: press and release the receiver programming button 3 times for channel three.
